- An informative and entertaining read on how to take great film photos*
- A must-have guide for those new to old-school film techniques*
- A much-needed book for the current resurgence of vintage 35mm film cameras*

Renewed interest in film photography has surged in the past few years, both among those rediscovering their past passion and those discovering it for the first time. Vintage cameras that had previously lost their value are now often worth more than they first sold for due to high demand amongst enthusiasts, students, and collectors. Film manufacturers have even started reissuing long discontinued stocks—for example, Kodak's much-loved and recently re-released classic Ektachrome slide film. In our modern world, billions of people have access to instantaneous photography on their mobile phones, but as a result there has been a resurgent desire for a more tactile, physical, unaltered, and thus honest medium. Much of which, ironically, ends up on the internet, with photography fans and influencers sharing their images across Instagram, Flickr, YouTube, and the like. More so than with digital photography, film photography requires a sense of craft, skill, patience, technical knowledge, and a trial-and-error process that results in a greater sense of accomplishment. Old School Photography is both enlightening and humorous, and attracts a new generation of fans who are eager to experiment with film cameras, make prints, and post their film photographs online.

Urban Biodiversity and Ecological Design for Sustainable Cities Keitaro Ito 2021-03-23 This book highlights various designs for urban green spaces and their functions. It provides an interesting meeting point between Asian, European and North America specialists (researchers, planners, landscape architects) studying urban biodiversity; urban biodiversity and green space; relations between people and biodiversity. The most important feature of this book is the unique point of view from each contributor towards "the relationship between nature and people in urban areas", in the context of the ecosystem and biodiversity in urban areas and how to manage them. All chapters explore and consider the relationship between humans and nature in cities, a subject which is taking on increasing importance as new cities are conceptualized and planned. Lars Tunbjörk Lars Tunbjörk 2006 'I love borås' is Lars Tunbjörk's document of an aimless journey around Sweden between 1988 and 1995. Supermarkets, parties, small town streets, amusement parks, gas stations, TV-shows, landscapes, food. During that time Tunbjörk was working on his series Landet utom sig / Country Beside Itself, but these images were not used in that series because they didn't fit, they were too ugly, too beautiful or too silly. Together they show a darker and more hysteric view of modern western society and Sweden during the economic recession of the early nineties.

The Film Developing Cookbook Steve Anshell 1998-12-21 The Film Developing Cookbook is an up-to-date manual for modern film development techniques. While the original Darkroom Cookbook focused entirely on photographic chemicals and formulae, this book concentrates on films, their characteristics, and the developers each requires for maximum control of the resulting image. The Film Developing Cookbook specifically addresses the difficult subject of T-grain film development. It includes rarely found information on film development and the nature of film developers. The authors take bold and controversial stances on many widely accepted film developing dogmas. They tackle many of the widely accepted "myths" of film development. They reject the trend toward 'scientific evaluation' of films and developers in favor of the photographer developing a personal aesthetic without relying exclusively on densitometry or H&D curves. Steve Anshell is a contributing editor to Outdoor Photographer and PhotoWork magazines. He has written columns, feature articles, and interviews for Camera & Darkroom, View Camera, PIC, Shutterbug, Photo Shopper, and PhotoPro magazines. His previous two books with Focal Press, The Darkroom Cookbook and The Variable Contrast Printing Manual are photography best-sellers. Steve's photographs have been exhibited in galleries and are shown in private collections. He photographs and prints both color and black-and-white with 35mm, 21¼ and large-format cameras. He has conducted over 80 photographic and darkroom workshops since 1979. Steve is currently the program director for the Photographer's Formulary Workshops in Condon, Montana. In early 1998, the first collection of his personal work,

entitled *The Nude at Big Sur*, will be published by Whitefish Editions. Bill Troop is a highly respected independent photochemist.

Film Is Not Dead Jonathan Canlas 2012-01-20 With the popularity of digital photography growing by leaps and bounds over the last decade, some say film has been dying a slow death ever since – or is already dead. The reality is that film has never gone away, and in recent years has experienced a surging, renewed popularity – sometimes simply for its retro, analog status, but mostly for film's ability to create a look and feel that many believe digital can still not achieve. If anyone can attest to this, it's Utah photographer Jonathan Canlas, who exclusively shoots with film, and has both an extremely successful wedding photography business as well as a series of popular workshops held numerous times per year around the world. In *Film Is Not Dead: A Digital Photographer's Guide to Shooting Film*, Canlas teams up with co-author Kristen Kalp to open the doors for anyone who wants to begin—or return to—shooting film. Casual, irreverent, fun, inspiring, and beautiful, this unique 10x8 hardcover book teaches the reader the basics of film, cameras, and shooting in this medium. Whether it's discussing the different tone and color characteristics of different films (Kodak, Fuji, etc.), how to load a medium-format camera back, how to create proper exposures, how and where to get film processed, or how Jonathan uses fun, plastic cameras like the Holga in his commercial and personal work, *Film Is Not Dead* appeals to anyone who is searching to finally begin creating that film look, but until now hasn't known where to start.

Diversity and Evolution of Butterfly Wing Patterns Toshio Sekimura 2017-08-29 This book facilitates an integrative understanding of the development, genetics and evolution of butterfly wing patterns. To develop a deep and realistic understanding of the diversity and evolution of butterfly wing patterns, it is essential and necessary to approach the problem from various kinds of key research fields such as "evo-devo," "eco-devo," "developmental genetics," "ecology and adaptation," "food plants," and "theoretical modeling." The past decade-and-a-half has seen a veritable revolution in our understanding of the development, genetics and evolution of butterfly wing patterns. In addition, studies of how environmental and climatic factors affect the expression of color patterns has led to increasingly deeper understanding of the pervasiveness and underlying mechanisms of phenotypic plasticity. In recognition of the great progress in research on the biology, an international meeting titled "Integrative Approach to Understanding the Diversity of Butterfly Wing Patterns (IABP-2016)" was held at Chubu University, Japan in August 2016. This book consists of selected contributions from the meeting. Authors include main active researchers of new findings of corresponding genes as well as world leaders in both experimental and theoretical approaches to wing color patterns. The book provides excellent case studies for graduate and undergraduate classes in evolution, genetics/genomics, developmental biology, ecology, biochemistry, and also theoretical biology, opening the door to a new era in the integrative approach to the analysis of biological problems. This book is open access under a CC BY 4.0 license.
