Illustrative Computer Programming for Libraries Charles Hargis Davis 1981 Job control cards; Input/output; PL/C Output; Control logic structures; Attributes; Format items; String functions; Comparison and logical operators; Arithmetic operators; Arrays, data aggregates; Program structure, design and testing; Documentation; Sorting; Subprograms, procedures; Text processing, keyword indexing; Files, storage; Record I/O structures; Online programming.

Archives and the Computer Michael J. Cook 2014-05-20 *Archives and the Computer* deals with the use of the computer and its systems and programs in archiving data and other related materials. The book covers topics such as the scope of automated systems in archives; systems for records management, archival description, and retrieval; and machine-readable archives. The book also features examples of systems for records management from different institutions such as the Tyne and Wear Archive Department, Dyfed Record Office, and the University of Liverpool. Included in the last part are appendices. Appendix A is a directory of archival systems, Appendix B contains guidelines for machine-readable and related records for preservation, and Appendix C covers machine-readable archives. The text is recommended for archivists who would like to know more about the use of computers in archiving of records and other related information.

Library Cataloguing and Classification Systems M.S. Ramalingam 2000 The book contains useful information on the technologies of cataloguing, evolution of cataloguing codes, structure of library catalogues etc., describing the characteristics of users, their information requirement and other related issues. It also contains a comparative, analytical and critical study that evaluates the works of classification systems. This book will constitute a meaningful contribution to contemporary literature in this crucial area. Students, scholars, academicians besides the professionals in the field, will find this book most useful.

Database Techniques for Librarians Andrew H. Bullen 1993 Librarians and library students need to understand database management techniques to make informed decisions about computers and to be able to use them effectively. Intended for the beginning- to intermediate-level programmer, Database Techniques for Librarians: A Primer Using Turbo Pascal describes the fundamentals of database design, sorting, searching, and screen design and control. All examples of programs and codes in this volume are written in Turbo Pascal, a widely used procedural language. Presented in a logical, easy-to-use format, Database Techniques for Librarians explains the inside details of programming spreadsheets, word processors, and databases. This reference is an essential resource for librarians up to the challenge of creating customized programming.

Computer Basics for Librarians and Information Scientists Howard Fosdick 1981 Explains the workings of computers, discusses the fundamentals of computer programming, and examines the uses of computer systems in libraries

Pascal Programming for Libraries Charles Hargis Davis 1988 Pascal Programming for Libraries is a practical introduction to computer programming designed specifically for library and information center applications. A graded text, this book provides detailed examples of straightforward programs, each fully illustrated and clearly explained. The examples begin with relatively simple computer code and progress to more complex examples using the highly acclaimed language TURBO Pascal, now widely used on personal computers. The applications illustrated deal with such operations as document retrieval, sorting, keyword indexing, selective dissemination of information, and rudimentary technical processes in libraries.
