Secular Nationalism and Citizenship in Muslim Countries Kail C. Ellis 2018-01-12 This edited volume examines the importance and significance of the Christian population in the Middle East and North Africa from the rise of Islam to present day. Specifically, the authors focus on the contributions of Christians to Arab politics, economy, and law. Using the current plight of Christians in the Muslim world (Iraq, Syria, Lebanon, Palestine, and Egypt), the contributors analyze the origins of the crises and propose recommendations and strategies to foster religious freedom, human rights, and an inclusive political system that ensures equality of citizenship for all communities to participate fully in their societies.

Observing the Observer Zahid Bukhari 2012 THE collection of papers in this volume documents the study of Islam in American Universities. Over the last few decades the United States has seen significant growth in the study of Islam and Islamic societies in institutions of higher learning fueled primarily by events including economic relations of the U.S. with Muslim countries, migration of Muslims into the country, conversion of Americans to Islam, U.S. interests in Arab oil resources, involvement of Muslims in the American public square, and the tragic events of 9/11. Although there is increasing recognition that the study of Islam and the role of Muslims is strategically essential in a climate of global integration, multiculturalism, and political turmoil, nevertheless, the state of Islamic Studies in America is far from satisfactory. The issue needs to be addressed, particularly as the need for intelligent debate and understanding is continuously stifled by what some have termed an "Islam industry" run primarily by fly-by journalists, think tank pundits, and cut-and-paste "experts."

The Genetics of Cancer B.A. Ponder 2012-12-06 It has been recognized for almost 200 years that certain families seem to inherit cancer. It is only in the past decade, however, that molecular genetics and epidemiology have combined to define the role of inheritance in cancer more clearly, and to identify some of the genes involved. The causative genes can be tracked through cancer-prone families via genetic linkage and positional cloning. Several of the genes discovered have subsequently been proved to play critical roles in normal growth and development. There are also implications for the families themselves in terms of genetic testing with its attendant dilemmas, if it is not clear that useful action will result. The chapters in *The Genetics of Cancer* illustrate what has already been achieved and take a critical look at the future directions of this research and its potential clinical applications.

History of Mehmed the Conqueror Kritovoulos 2019-03-12 Five hundred years ago the great walled city of Constantinople fell under the relentless siege of the Ottoman Turks led by Sultan Mehmed II, Mehmed the Conqueror. Kristovoulos, one of the vanquished Greeks, later entered into the service of the Conqueror and began to write a history of the Sultan's life, starting with the year 1451, the beginning of Mehmed's 31-year reign. Death apparently prevented Kritovoulos from completing his account, but the manuscript covering the first seventeen years has been preserved and this exciting chronicle is here translated into English for the first time. The Human Journey Kevin Reilly 2018-05-04 *The Human Journey* offers a truly concise yet satisfyingly full history of the world from ancient times to the present. The book's scope, as the title implies, is the whole story of humanity, in planetary context. Its themes include not only the great questions of the humanities—nature versus nurture, the history and meaning of human variation, the sources of wealth and causes of revolution—but also the major transformations in human history: agriculture, cities, iron, writing, universal religions, global trade, industrialization, popular government, justice, and equality. In each conceptually rich chapter, leading historian Kevin Reilly concentrates on a single important period and theme, sustaining a focused narrative and analytical perspective. Chapter 2, for example, discusses the significance of bronze-age urbanization and the advent of the Iron Age. Chapter 3 examines the meaning and significance of the age of "classical" civilizations. Chapter 4 explains the spread of universal religions and new technologies in the postclassical age of Eurasian integration. But these examples also reveal a range of approaches to world history. The first chapter is an example of current "Big History," the second of history as technological transformations, the third of comparative history, the fourth the history of connections that dominates, and thus narrows, so many texts. Free of either a confined, limiting focus or a mandatory laundry list of topics, this book begins with our most important questions and searches all of our past for answers. Well-grounded in the latest scholarship, this is not a fill-in-the-blanks text, but world history in a grand humanistic tradition.

Case Studies in Islamic Banking and Finance Brian Kettell 2011-08-15 Based around 13 individual cases, this book will stimulate discussion and develop the reader's understanding of Islamic finance by contrasting their existing theoretical knowledge against practical examples.

The Fourth Industrial Revolution Klaus Schwab 2017-01-03 The founder and executive chairman of the World Economic Forum on how the impending technological revolution will change our lives We are on the brink of the Fourth Industrial Revolution. And this one will be unlike any other in human history. Characterized by new technologies fusing the physical, digital and biological worlds, the Fourth Industrial Revolution will impact all disciplines, economies and industries - and it will do so at an unprecedented rate. World Economic Forum data predicts that by 2025 we will see: commercial use of nanomaterials 200 times stronger than steel and a million times thinner than human hair; the first transplant of a 3D-printed liver; 10% of all cars on US roads being driverless; and much more besides. In *The Fourth Industrial*

Revolution, Schwab outlines the key technologies driving this revolution, discusses the major impacts on governments, businesses, civil society and individuals, and offers bold ideas for what can be done to shape a better future for all.

A World Without Islam Graham E. Fuller 2010-08-11 What if Islam never existed? To some, it's a comforting thought: no clash of civilizations, no holy wars, no terrorists. But what if that weren't the case at all? In *A World Without Islam*, Graham E. Fuller guides us along an illuminating journey through history, geopolitics, and religion to investigate whether or not Islam is indeed the cause of some of today's most emotional and important international crises. Fuller takes us from the birth of Islam to the fall of Rome to the rise and collapse of the Ottoman Empire. He examines and analyzes the roots of terrorism, the conflict in Israel, and the role of Islam in supporting and energizing the anti-imperial struggle. Provocatively, he finds that contrary to the claims of many politicians, thinkers, theologians, and soldiers, a world without Islam might not look vastly different from what we know today. Filled with fascinating details and counterintuitive conclusions, *A World Without Islam* is certain to inspire debate and reshape the way we think about Islam's relationship with the West.

Orientalism Edward W. Said 2014-10-01 More than three decades after its first publication, Edward Said's groundbreaking critique of the West's historical, cultural, and political perceptions of the East has become a modern classic. In this wide-ranging, intellectually vigorous study, Said traces the origins of "orientalism" to the centuries-long period during which Europe dominated the Middle and Near East and, from its position of power, defined "the orient" simply as "other than" the occident. This entrenched view continues to dominate western ideas and, because it does not allow the East to represent itself, prevents true understanding. Essential, and still eye-opening, *Orientalism* remains one of the most important books written about our divided world.

Islamic Societies to the Nineteenth Century Ira M. Lapidus 2012-10-22 First published in 1988, Ira Lapidus' *A History of Islamic Societies* has become a classic in the field, enlightening students, scholars, and others with a thirst for knowledge about one of the world's great civilizations. This book, based on fully revised and updated parts one and two of this monumental work, describes the transformations of Islamic societies from their beginning in the seventh century, through their diffusion across the globe, into the challenges of the nineteenth century. The story focuses on the organization of families and tribes, religious groups and states, showing how they were transformed by their interactions with other religious and political communities. The book concludes with the European commercial and imperial interventions that initiated a new set of transformations in the Islamic world, and the onset of the modern era. Organized in narrative sections for the history of each major region, with innovative, analytic summary introductions and conclusions, this book is a unique endeavour.

The Case for God Karen Armstrong 2009-09-22 From the bestselling author of *A History of God* and *The Great Transformation* comes a balanced, nuanced understanding of the role religion plays in human life and the trajectory of faith in modern times. Why has God become incredible? Why is it that atheists and theists alike now think and speak about God in a way that veers so profoundly from the thinking of our ancestors? Moving from the Paleolithic Age to the present, Karen Armstrong details the lengths to which humankind has gone to experience a sacred reality that it called God, Brahman, Nirvana, Allah, or Dao. She examines the diminished impulse toward religion in our own time when a significant number of people either want nothing to do with God or question the efficacy of faith. With her trademark depth of

knowledge and profound insight, Armstrong elucidates how the changing world has necessarily altered the importance of religion at both societal and individual levels. And she makes a powerful, convincing argument for structuring a faith that speaks to the needs of our dangerously polarized age.

Global Trends 2040 National Intelligence Council 2021-03 "The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Time in Early Modern Islam Stephen P. Blake 2013-02-11 The prophet Muhammad and the early Islamic community radically redefined the concept of time that they had inherited from earlier religions' beliefs and practices. This new temporal system, based on a lunar calendar and era, was complex and required sophistication and accuracy. From the ninth to the sixteenth centuries, it was the Muslim astronomers of the Ottoman, Safavid and Mughal empires who were responsible for the major advances in mathematics, astronomy and astrology. This fascinating study compares the Islamic concept of time, and its historical and cultural significance, across these three great empires. Each empire, while mindful of earlier models, created a new temporal system, fashioning a new solar calendar and era and a new round of rituals and ceremonies from the cultural resources at hand. This book contributes to our understanding of the Muslim temporal system and our appreciation of the influence of Islamic science on the Western world.

Useful Enemies Noel Malcolm 2019-05-02 From the fall of Constantinople in 1453 until the eighteenth century, many Western European writers viewed the Ottoman Empire with almost obsessive interest. Typically they reacted to it with fear and distrust; and such feelings were reinforced by the deep hostility of Western Christendom towards Islam. Yet there was also much curiosity about the social and political system on which the huge power of the sultans was based. In the sixteenth century, especially, when Ottoman territorial expansion was rapid and Ottoman institutions seemed particularly robust, there was even open admiration. In this path-breaking book Noel Malcolm ranges through these vital centuries of East-West interaction, studying all the ways in which thinkers in the West interpreted the Ottoman Empire as a political phenomenon - and Islam as a political religion. Useful Enemies shows how the concept of 'oriental despotism' began as an attempt to turn the tables on a very positive analysis of Ottoman state power, and how, as it developed, it interacted with Western debates about monarchy and government. Noel Malcolm also shows how a negative portrayal of Islam as a religion devised for political purposes was assimilated by radical writers, who extended the criticism to all religions, including Christianity itself. Examining the works of many famous thinkers (including Machiavelli, Bodin, and Montesquieu) and many less well-known ones, Useful Enemies illuminates the long-term development of Western ideas about the Ottomans, and about Islam. Noel Malcolm shows how these ideas became intertwined with internal Western debates about power, religion, society, and war. Discussions of Islam and the Ottoman Empire were thus bound up with mainstream thinking in the West on a wide range of important topics. These Eastern enemies were not just there to be denounced. They were there to be made use of, in arguments which contributed significantly to the development of Western political thought.

The Muslim World After 9/11 Angel Rabasa 2004-11-17 Momentous events since September 11, 2001-Operation Enduring Freedom, the global war on terrorism, and the war in Iraq-have dramatically altered the political environment of the Muslim world. Many of the forces influencing this environment, however, are the products of trends that have been at work for many decades. This book examines the major dynamics that drive changes in the religio-political landscape of the Muslim world-a vast and diverse region that stretches from Western Africa through the Middle East to the Southern Philippines and includes Muslim communities and diasporas throughout the world-and draws the implications of these trends for global security and U.S. and Western interests. It presents a typology of ideological tendencies in the different regions of the Muslim world and identifies the factors that produce religious extremism and violence. It assesses key cleavages along sectarian, ethnic, regional, and national lines and examines how those cleavages generate challenges and opportunities for the United States. Finally, the authors identify possible strategies and political and military options for the United States to pursue in response to changing conditions in this critical and volatile part of the world.
