A Constructed Peace Marc Trachtenberg 2020-06-23 People still think of the Cold War as a simple two-sided conflict, a kind of gigantic arm wrestle on a global scale," writes Marc Trachtenberg, "but this view fails to grasp the essence of what was really going on." America and Russia were both willing to live with the status quo in Europe. What then could have generated the kind of conflict that might have led to a nuclear holocaust? This is the great puzzle of the Cold War, and in this book, the product of nearly twenty years of work, Trachtenberg tries to solve it. The answer, he says, has to do with the German question, especially with the German nuclear question. These issues lay at the heart of the Cold War, and a relatively stable peace took shape only when they were resolved. The book develops this argument by telling a story--a complex story involving many issues of detail, but focusing always on the central question of how a stable international system came into being during the Cold War period. A Constructed Peace will be of interest not just to students of the Cold War, but to people concerned with the problem of war and peace, and in particular with the question of how a stable international order can be constructed, even in our own day.

ABC Family to Freeform TV Emily L. Newman 2018 Launched in 1977 by the Christian Broadcasting Service (originally associated with Pat Robertson), the ABC Family/Freeform network has gone through a number of changes in name and ownership. Over the past decade, the network—now owned by Disney—has redefined "family programming" for its targeted 14- to 34-year-old demographic, addressing topics like lesbian and gay parenting, postfeminism and changing perceptions of women, the issue of race in the U.S., and the status of disability in American culture. This collection of new essays examines the network from a variety of perspectives, with a focus on inclusive programming that has created a space for underrepresented communities like transgender youth, overweight teens, and the deaf.

Guilty Admissions Nicole LaPorte 2021-02-23 This entertaining exposé on how the other half gets in tells the shockingly true story of the Varsity Blues scandal, and all of the crazy parents, privilege, and con men involved. Guilty Admissions weaves together the story of an unscrupulous college counselor named Rick Singer, and how he preyed on the desperation of some of the country's wealthiest families living in a world defined by fierce competition, who function under constant pressure to get into the "right" schools, starting with pre-school; non-stop fundraising and donation demands in the form of multi-million-dollar galas and private parties; and a community of deeply insecure parents who will do anything to get their kids into name-brand colleges in order to maintain their own A-list status. Investigative reporter Nicole LaPorte lays bare the source of this insecurity—that in 2019, no special "hook" in the form of legacy status, athletic talent, or financial giving can guarantee a child's entrance into an elite school. The result is paranoia, deception, and true crimes at the peak of the American social pyramid. With a glittering cast of Hollywood actors—including Felicity Huffman and Lori Loughlin—hedge fund CEOs, sales executives, and media titans, Guilty Admissions is a soap-opera-slash-sneak-peek-behind-the-curtains at America's richest social circles; an examination of the cutthroat world of college admissions; and a parable of American society in 2019, when the country is run by a crass tycoon and all totems of status and achievement have become transactional and removed from traditions of ethical restraint. A world where the rich get whatever they want, however they want it.

Suspended For Life C. Twiggy Billue 2014-07-16 "SUSPENDED FOR LIFE" takes an empirical look via real experiences at how Zero Tolerance Policies contained in the schools "Code of Conduct" disregards the rights of the student, especially students with disabilities. These policies are failing students everywhere including my residence of Syracuse New York. Statistically these unfair and biased "Zero Tolerance Policies" have led to very high suspension rates affecting mainly, inner-city students but overwhelmingly target students with IEPs, 504 Accommodations, the "untested but suspected LD student" and the intellectually gifted student. Healthcare, Mental Health and Medical Privacy (HIPPA) now play large roles in school especially in decisions to suspend a student however coupled with a school districts Code of Conduct they have become a crucial aspect for suspension. Once you understand the link between a referral to "In-School-Suspension (ISS) warehousing students) or a referral for Out-of-School Suspension (OSS—push out of students) you will realize that in most cases suspension can lead directly to the prison industrial complex for our young women and men. Stopping this from happening to your student may depend on how well you are prepared to advocate for your child. We must not allow suspension to push out our children because ostensibly it may be ensuring them a life sentence of unemployment, crime, or even death. We say it starts at home with the parents, so if we can better understand our student's rights and the rights we have as parents we can better prepare ourselves to advocate for our student and to hold the school district accountable for the Education of Our Children!

The Restoration of the Roman Forum in Late Antiquity Gregor Kalas 2015-04-15 In *The Restoration of the Roman Forum in Late Antiquity*, Gregor Kalas examines architectural conservation during late antiquity period at Rome's most important civic center: the Roman Forum. During the fourth and fifth centuries CE—when emperors shifted their residences to alternate capitals and Christian practices overtook traditional beliefs—elite citizens targeted restoration campaigns so as to infuse these initiatives with political meaning. Since construction of new buildings was a right reserved for the emperor, Rome's upper echelon funded the upkeep of buildings together with sculptural displays to gain public status. Restorers linked themselves to the past through the fragmentary reuse of building materials and, as Kalas explores, proclaimed their importance through prominently inscribed statues and monuments, whose placement within the existing cityscape allowed patrons and honorees to connect themselves to the celebrated history of Rome. Building on art historical studies of spolia and exploring the Forum over an extended period of time, Kalas demonstrates the mutability of civic environments. *The Restoration of the Roman Forum in Late Antiquity* maps the evolution of the Forum away from singular projects composed of new materials toward an accretive and holistic design sensibility. Overturning notions of late antiquity as one of decline, Kalas demonstrates how perpetual reuse and restoration drew on Rome's venerable past to proclaim a bright future.

Collaborative Practice Connie Healy 2017-09-19 Collaborative practice is a new method of dispute resolution, used mainly in family law matters. By taking a non-adversarial approach, it challenges the strictly positivist view of the lawyer as 'zealous advocate' for the client. As such, it has received much criticism from the established Bar and legal profession. This book provides a doctrinal and empirical analysis of collaborative practice with a view to assessing its place within the dispute resolution continuum and addressing whether this criticism has been justified. It begins by establishing the theoretical underpinnings of conflict and differing approaches to conflict resolution, the impact of the comprehensive law movement and therapeutic jurisprudence. The origins and development of the collaborative process and the framework it provides for a multidisciplinary approach to conflict resolution is outlined. The book addresses the examination of the process undertaken in the lead up to the enactment of the Uniform Collaborative Law Act in 2010; now regarded as a model of best practice. Finally, through an examination of empirical research undertaken in the US, Canada and in England and Wales, and in presenting the results of the first known empirical research into the process in an Irish family law context, the book concludes with an evidenced based analysis of the process from the perspective of couples who chose to use the collaborative model to resolve the issues surrounding their relationship breakdown, collaborative lawyers and lawyers who do not advocate a non-adversarial approach. As such this book provides a valuable insight into the process which will be of interest to: academics; practising lawyers; members of the judiciary; researchers in the fields of conflict resolution and family law and for students studying alternative dispute resolution (ADR).

Superstorm Sandy Diane C. Bates 2016-01-18 Sandy was the costliest hurricane in U.S. history after Katrina, but the waters had barely receded from the Jersey coast when massive efforts began to "Restore the Shore." Why do people build in areas open to repeated natural disasters? And why do they return to these areas in the wake of major devastation? Drawing on a variety of insights from environmental sociology, *Superstorm Sandy* answers these questions as it looks at both the unique character of the Jersey Shore and the more universal ways that humans relate to their environment. Diane C. Bates offers a wide-ranging look at the Jersey Shore both before and after Sandy, examining the many factors—such as cultural attachment, tourism revenues, and governmental regulation—that combined to create a highly vulnerable coastal region. She explains why the Shore is so important to New Jerseyans, acting as a key cultural touchstone in a state that lacks a central city or even a sports team to build a shared identity among the state's residents. She analyzes post-Sandy narratives about the Jersey Shore that trumpeted the dominance of human ingenuity over nature (such as the state's "Stronger than the Storm" advertising campaign) or proclaimed a therapeutic community ("Jersey Strong")—narratives rooted in emotion and iconography, waylaying any thought of the near-certainty of future storms. The book also examines local business owners, politicians, real estate developers, and residents who have vested interests in the region, explaining why the Shore was developed intensively prior to Sandy, and why restoration became an imperative in the post-storm period. Engagingly written and insightful, *Superstorm Sandy* highlights the elements that compounded the disaster on the Shore, providing a framework for understanding such catastrophes and preventing them in the future.

Topics include disability, sustainability, first-year writing, underrepresented groups on campus, online education, adjunct labor, and the way profit-driven agendas have shaped colleges and universities.

Will College Pay Off? Peter Cappelli 2015-06-09 The decision of whether to go to college, or where, is hampered by poor information and inadequate understanding of the financial risk involved. Adding to the confusion, the same degree can cost dramatically different amounts for different people. A barrage of advertising offers new degrees designed to lead to specific jobs, but we see no information on whether graduates ever get those jobs. Mix in a frenzied applications process, and pressure from politicians for "relevant" programs, and there is an urgent need to separate myth from reality. Peter Cappelli, an acclaimed expert in employment trends, the workforce, and education, provides hard evidence that counters conventional wisdom and helps us make cost-effective choices. Among the issues Cappelli analyzes are: What is the real link between a college degree and a job that enables you to pay off the cost of college, especially in a market that is in constant change? Why it may be a mistake to pursue degrees that will land you the hottest jobs because what is hot today is unlikely to be so by the time you graduate. Why the most expensive colleges may actually be the cheapest because of their ability to graduate students on time. How parents and students can find out what different colleges actually deliver to students and whether it is something that employers really want. College is the biggest expense for many families, larger even than the cost of the family home, and one that can bankrupt students and their parents if it works out poorly. Peter Cappelli offers vital insight for parents and students to make decisions that both make sense financially and provide the foundation that will help students make their way in the world.

Power to the Transfer Dimpal Jain 2020-02-01 Currently, U.S. community colleges serve nearly half of all students of color in higher education who, for a multitude of reasons, do not continue their education by transferring to a university. For those students who do transfer, often the responsibility for the application process, retention, graduation, and overall success is placed on them rather than their respective institutions. This book aims to provide direction toward the development and maintenance of a transfer receptive culture, which is defined as an institutional commitment by a university to support transfer students of color. A transfer receptive culture explicitly acknowledges the roles of race and racism in the vertical transfer process from a community college to a university and unapologetically centers transfer as a form of equity in the higher education pipeline. The framework is guided by critical race theory in education, which acknowledges the role of white supremacy and its contemporary and historical role in shaping institutions of higher learning.

A History of Archaeological Tourism Margarita Díaz-Andreu 2020-02-24 This book examines the relationship between archaeological tourism and professional archaeology. To do so, it explores the connection - most visibly through nationalism and global capitalism - from its origins in the early modern period to World War II. How separate is the development of archaeological tourism from that of the formation of archaeology as a discipline? And do the fields operate in two different worlds? Scholarly discussions have largely treated them as distinct fields with no connection, while histories of archaeology, in particular, have focused on aspects such as the history of archaeological discoveries, archaeological thought and, more recently, the political relationship between archaeology and nationalism and other ideologies. Largely missing from all these accounts has been an examination of how archaeology has been incorporated into society, for example through something that all humans enjoy - leisure - in the form of archaeological tourism. Moreover, just as histories of archaeology have largely ignored the connection between archaeology and tourism, so too has tourism in the

reverse direction. Recent studies on tourism have centered on topics such as economy (sustainable and recession tourism) and new types of tourism (including ecotourism and medical tourism).

The Grain-Free, Sugar-Free, Dairy-Free Family Cookbook Leah Webb 2019-05-13 Including One Month of Kid-Friendly Meal Plans and Detailed Shopping Lists to Make Life Easier As the rate of chronic illness skyrockets, more and more parents are faced with the sobering reality of restrictive diets. And because everyone is busy, many families come to rely on store-bought “healthy” products to make life simpler, but many of these are loaded with sugar and hidden toxins. When faced with her own family health crisis, mother and health coach Leah Webb realized that in order to consistently provide high quality food for her family, nearly 100 percent of their meals would need to be homemade. But when she looked for a resource to guide her, most cookbooks that offered recipes “free” of allergenic foods were also high in processed starches, flours, and sugar. Webb, like so many parents, was looking for a cookbook that offered deeply nutritious, kid-friendly, whole foods recipes that were also easy, but there wasn’t one—so she wrote it herself. *The Grain-Free, Sugar-Free, Dairy-Free Family Cookbook* offers a new system to preparing food and approaching the kitchen that gets kids involved in cooking, which encourages excitement around food (a major challenge with restrictive diets). The recipes are rich in healthy fats, nutrient-dense vegetables, ferments, and grass-fed meats, and include snacks, school lunches, and delicious sweet treats that rival the flavors of sugar-dense desserts. By following Leah’s meal plans, parents will be sure to please everyone in the family and make cooking on a restrictive diet enjoyable and doable over a long period of time. Families that know they would like to rid themselves of grain, sugar, and dairy, but are intimidated by starting, will find Webb’s advice and troubleshooting invaluable. The cookbook outlines family-tested methods that make for effective and efficient preparation, including everyday basic recipes that will become part of a cook’s intuitive process over time. The best part is that although Leah prepares nearly every single one of her family’s breakfasts, lunches, dinners, and snacks using whole food ingredients, she only spends four to six hours on food preparation per week! Through stocking her freezer, prepping the kitchen, shopping and cooking in bulk, and consistently planning meals, this diet plan is not only possible; it is manageable and fulfilling. Prepare for this cookbook to radically change your life.

Social Matthew D. Lieberman 2013-10-08 We are profoundly social creatures--more than we know. In *Social*, renowned psychologist Matthew Lieberman explores groundbreaking research in social neuroscience revealing that our need to connect with other people is even more fundamental, more basic, than our need for food or shelter. Because of this, our brain uses its spare time to learn about the social world--other people and our relation to them. It is believed that we must commit 10,000 hours to master a skill. According to Lieberman, each of us has spent 10,000 hours learning to make sense of people and groups by the time we are ten. *Social* argues that our need to reach out to and connect with others is a primary driver behind our behavior. We believe that pain and pleasure alone guide our actions. Yet, new research using fMRI--including a great deal of original research conducted by Lieberman and his UCLA lab--shows that our brains react to social pain and pleasure in much the same way as they do to physical pain and pleasure. Fortunately, the brain has evolved sophisticated mechanisms for securing our place in the social world. We have a unique ability to read other people’s minds, to figure out their hopes, fears, and motivations, allowing us to effectively coordinate our lives with one another. And our most private sense of who we are is intimately linked to the important people and groups in our lives. This wiring often leads us to restrain our selfish impulses for the greater good. These mechanisms lead to behavior that might seem irrational, but is really just the result of our deep social wiring and necessary for our success as a species. Based on the latest cutting edge research, the findings in *Social* have important real-world implications. Our schools and businesses, for example, attempt to minimize social distractions. But this is exactly the wrong thing to do to encourage engagement and learning, and literally shuts down the social brain, leaving powerful neuro-cognitive resources untapped. The insights revealed in this pioneering book suggest ways to improve learning in schools, make the workplace more productive, and improve our overall well-being.

The Kind Mama Alicia Silverstone 2014-04-15 The bestselling author of *The Kind Diet* offers practical solutions for a healthier, more vibrant approach to new motherhood When did making babies get to be so hard? Infertility is on the rise globally, affecting as many as one in six couples. But instead of looking at diet and lifestyle as key factors, doctors are racing to pump their patients full of expensive and invasive fertility treatments. Once pregnant, women just accept that carrying a baby will be the gassy, swollen, irritable, sleepless nightmare that has become the new normal. Once their babies are born, they assume it will be just as challenging—from breastfeeding woes to screaming fits and constant trips to the doctor. It doesn’t have to be that way. In *The Kind Mama*, Alicia Silverstone shows that if we kick nasty foods that fight our bodies and replace them with nutrient-rocking “clean” foods that heal and nourish, we can create a more positive baby-

making experience, from conception through the third trimester (and beyond). By encouraging basic diet and lifestyle modifications and drawing on wisdom from medical experts, friends, and her own experience, Silverstone has created a one-stop guide that empowers women to take charge of their fertility and pregnancy, and helps them to embark on a healthier, more vibrant path to parenthood.

Global Cities Robert Gottlieb 2017-05-19 How Los Angeles, Hong Kong, and China deal with such urban environmental issues as ports, goods movement, air pollution, water quality, transportation, and public space. Over the past four decades, Los Angeles, Hong Kong, and key urban regions of China have emerged as global cities—in financial, political, cultural, environmental, and demographic terms. In this book, Robert Gottlieb and Simon Ng trace the global emergence of these urban areas and compare their responses to a set of six urban environmental issues. These cities have different patterns of development: Los Angeles has been the quintessential horizontal city, the capital of sprawl; Hong Kong is dense and vertical; China's new megacities in the Pearl River Delta, created by an explosion in industrial development and a vast migration from rural to urban areas, combine the vertical and the horizontal. All three have experienced major environmental changes in a relatively short period of time. Gottlieb and Ng document how each has dealt with challenges posed by ports and the movement of goods, air pollution (Los Angeles, Hong Kong, and urban China are all notorious for their hazardous air quality), water supply (all three places are dependent on massive transfers of water) and water quality, the food system (from seed to table), transportation, and public and private space. Finally they discuss the possibility of change brought about by policy initiatives and social movements.

A Framework to Guide Selection of Chemical Alternatives National Research Council 2014-10-29 Historically, regulations governing chemical use have often focused on widely used chemicals and acute human health effects of exposure to them, as well as their potential to cause cancer and other adverse health effects. As scientific knowledge has expanded there has been an increased awareness of the mechanisms through which chemicals may exert harmful effects on human health, as well as their effects on other species and ecosystems. Identification of high-priority chemicals and other chemicals of concern has prompted a growing number of state and local governments, as well as major companies, to take steps beyond existing hazardous chemical federal legislation. Interest in approaches and policies that ensure that any new substances substituted for chemicals of concern are assessed as carefully and thoroughly as possible has also burgeoned. The overarching goal of these approaches is to avoid regrettable substitutions, which occur when a toxic chemical is replaced by another chemical that later proved unsuitable because of persistence, bioaccumulation, toxicity, or other concerns. Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health, and to provide guidance on how the industry may develop and adopt safer alternatives. *A Framework to Guide Selection of Chemical Alternatives* develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks. This new framework is informed by previous efforts by regulatory agencies, academic institutions, and others to develop alternative assessment frameworks that could be operationalized. In addition to hazard assessments, the framework incorporates steps for life-cycle thinking - which considers possible impacts of a chemical at all stages including production, use, and disposal - as well as steps for performance and economic assessments. The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment process. This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes, and examination of tradeoffs between these risks and factors such as product functionality, product efficacy, process safety, and resource use. Through case studies, this report demonstrates how different users in contrasting decision contexts with diverse priorities can apply the framework. This report will be an essential resource to the chemical industry, environmentalists, ecologists, and state and local governments.
